**Re: Support for H.R. 5816, National Informed Consent Exemption (NICE) Act**

Congressman Gohmert,

Children's Health Defense (CHD) applauds your courage, vision and leadership in sponsoring the National Informed Consent Exemption (NICE) Act. We offer this letter in support. The greatest crisis that our nation faces is the chronic disease epidemic in America's children. Over half of our country's young people now suffer from one or more debilitating chronic health conditions—yet our federal agencies do little to assist or even acknowledge this unprecedented national tragedy. Your efforts are therefore critical.

The expanding vaccine schedule is clearly a potential culprit in this exploding epidemic. Virtually all the newly epidemic chronic diseases are listed side effects on the manufacturer's inserts of the sixteen currently recommended childhood vaccines. It is therefore troubling that public health officials cannot show clear, unambiguous scientific proof of their claims that vaccines are safe and effective. There has never been a single double-blind study to show net beneficial health outcomes of vaccines taken in the current quantities, combinations, and accumulations. It is time to stop guessing. Most recently the FDA has rushed through Emergency Use Authorization for experimental mRNA gene therapy for children—ages five to eleven—based on haphazard and nebulous statistics and industry propaganda fortified by widespread censorship of common sense questions and open debate. It is imperative that we start measuring vaccine safety by good old-fashioned science.

Thanks for your bold leadership, which is the only hope, now, for America's children.

Sincerely,

Robert F. Kennedy, Jr.
