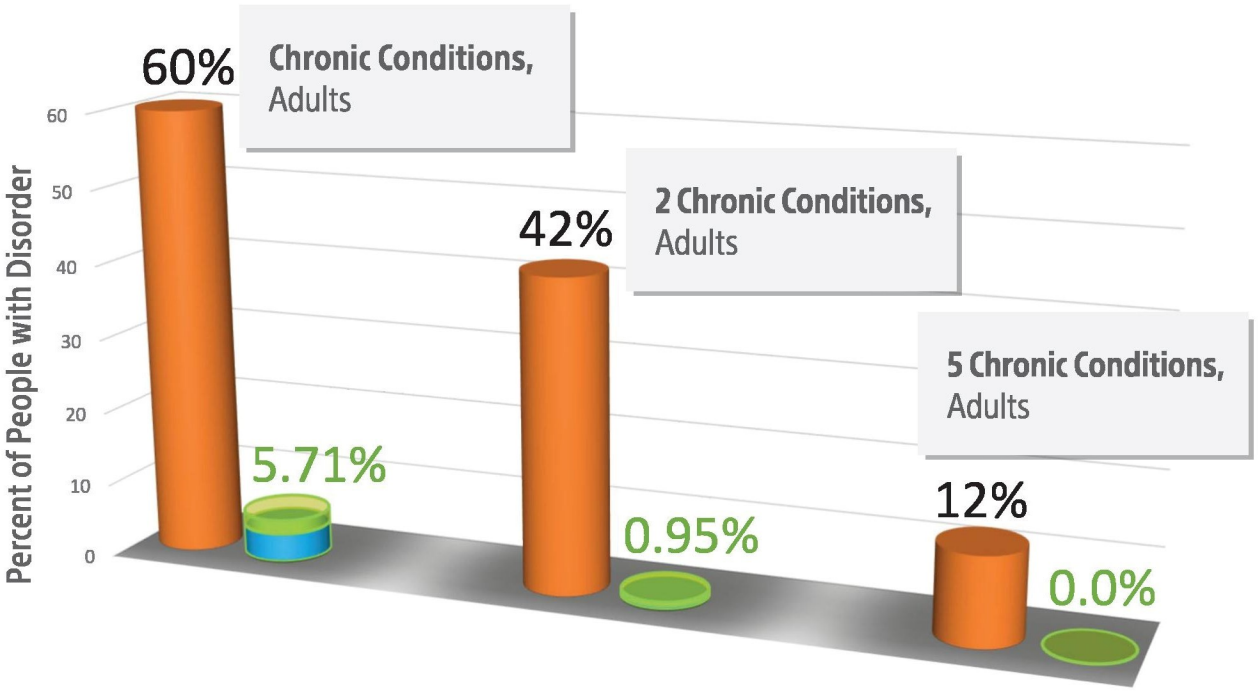
2020 Pilot Survey Data Comparison

VACCINATED -vs- UNVACCINATED



"The cure cannot be worse than the problem itself."
- President Donald J. Trump, October 22, 2020, Presidential Debate

- **U.S. National data for approximately 99%+ Vaccinated Population**
  (CDC, Chronic Diseases in America. https://www.cdc.gov/chronicdisease/resources/infographic/chronic-diseases.htm)
- **Pilot survey data for 100% Unvaccinated Control Group**
  - △ Unvaccinated but exposed to K-shot and/or maternal vaccination
  - ▲ Unvaccinated and unexposed to K-shot and maternal vaccination

THE CONTROL GROUP
LITIGATION

Unvaccinated Population

- **Risk Factor in Total Population = 5.71%**
  This pilot survey provides numerical proof that vaccines are causing an exponential increased risk of chronic illness in America. Specifically, the odds that this large control group of unvaccinated adults (as featured on this chart) would be exponentially healthier than vaccinated adults by mere chance: 1 in 245,083,100,778,672,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000. This calculation is supported by the p-value 4.08E-63. See full report for detailed explanation.

  Subsets - Chronic Conditions
  - △ **12.50%** (risk factor within the subset group that received the K-shot and/or pregnancy vaccination)
  - ▲ **4.49%** (risk factor within the subset group unexposed to the K-shot and pregnancy vaccination)
- **Risk Factors in Total Population = 0.95%**
  This pilot survey provides numerical proof that vaccines are causing an exponential increased risk of chronic illness in America. Specifically, the odds that this large control group of unvaccinated adults (as featured on this chart) would be exponentially healthier than vaccinated adults by mere chance: 1 in 4,105,862,277,506,450,000,000,000,000,000,000,000,000,000,00. This calculation is supported by the p-value 2.44E-46. See full report for detailed explanation.

  Subsets - 2 Chronic Conditions
  - △ **3.13%** (risk factor within the subset group that received the K-shot and/or pregnancy vaccination)
  - ▲ **0.56%** (risk factor within the subset group unexposed to the K-shot and pregnancy vaccination)
- **Risk Factors in Total Population = 0.00%**
  This pilot survey provides numerical proof that vaccines are causing an exponential increased risk of chronic illness in America. Specifically, the odds that this large control group of unvaccinated adults (as featured on this chart) would be exponentially healthier than vaccinated adults by mere chance: 1 in 455,657,841,434. This calculation is supported by the p-value 2.19E-12. See full report for detailed explanation.

*Total survey produced 99% Confidence Interval [5.95,5.99] without finite population correction. Please see full report for all sample rates, equations, values, and methodology.
